MARIA JÚLIA CARVALHO SOUSA

Data Analyst | Analytics Engineer

Fortaleza, Brazil | Open to remote work

+55 85 98404-2539 | mariajuliacrss@gmail.com | linkedin.com/in/mariajuliacs | github.com/mariajuliacs

PROFESSIONAL SUMMARY

Data professional with 2 years of experience in data engineering and analytics in the retail sector. I build ETL/ELT pipelines in Python and SQL that integrate ERP systems, APIs, web scraping and spreadsheets into PostgreSQL, maintaining databases with daily (D-1) loads for more than 200 business users. I automate manual processes with Python, Playwright and Power Automate, cutting execution time by up to 90%, and build analytics solutions in Power BI that have supported decisions with direct impact on results. I also develop data applications with FastAPI, PostgreSQL and Docker.

PROFESSIONAL EXPERIENCE

Grupo Vilarouca — Fortaleza, Brazil

Multi-brand retail group operating O Boticário, Arezzo, Vans and Crocs franchises, pharmacies and a private label. Data & Automation department, 5-person team.

Junior Data Analyst

Feb 2025 – Present

- Build and maintain 8 ETL/ELT data pipelines in Python and SQL, integrating three ERP systems, APIs, web scraping and spreadsheets into PostgreSQL, with daily D-1 loads of historical data since 2024.
- Maintain, together with the team, an environment of roughly 50 PostgreSQL tables, working on relational modeling, data standardization and data cleansing.
- Automated the extraction of an operational report with Python and Playwright, cutting processing time from 20 to 2 minutes (90% reduction).
- Proposed adopting Apache Airflow in the department, now used to schedule my store automations; DAG deployment is handled by senior engineering.
- Built 5 Power BI dashboards (DAX, Power Query) for Logistics, Sales, HR/Payroll and Executive leadership; the commercial discount analysis supported measures that reduced the indicator by more than 20%.
- Built the Incentive & Commission Engine, a FastAPI web application that replaced the spreadsheet-based commission process, reducing the time to create and track an incentive from 1 month to the same day (see Projects).
- Developed order report automations and a delivery-flow monitoring dashboard for Procurement and Logistics, tracking suppliers' delivery schedules and supporting stock-out control; it replaced most manual spreadsheet controls.
- Gather requirements with business areas and write technical documentation for the department's routines.

Data Intern

Jul 2024 – Jan 2025

- Developed Python and Power Automate scripts and automations for repetitive business processes.
- Supported data cleansing, organization and analysis routines.
- Documented technical workflows, automations and routines.
- Supported the team with data and automation requests.

PROJECTS

Incentive & Commission Engine — Commission Management Application

2026

Internal web system to create, approve and track incentives and commissions, built entirely by me, from requirements gathering to deployment.

- FastAPI (Python) backend with PostgreSQL, containerized with Docker; roughly 15,000 lines of code.
- Two-database architecture: the application's own database plus a read-only connection to the sales database, preserving the integrity of the data source.
- Access control with three permission roles, bcrypt password hashing and an audit trail.
- Three-step approval workflow (draft, pending, approved) with automatic email notifications and Excel exports.
- Calculation engine configurable by end users, allowing incentive and commission rules to be built without code changes.
- Result: the lead time for a new incentive dropped from about 1 month to the same day, impacting more than 200 people across stores, Sales, HR/Payroll and Executive leadership.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Databases:** PostgreSQL, Relational Modeling, DBeaver
- **Data Engineering:** ETL, ELT, Data Pipelines, Data Integration, REST APIs, Data Cleansing and Standardization
- **Automation:** Playwright, Web Scraping, Power Automate
- **Orchestration:** Apache Airflow
- **Development:** FastAPI, Docker, Git, GitHub, Linux
- **BI & Analytics:** Power BI, DAX, Power Query, Excel
- **Currently learning:** AWS S3, Databricks, Apache Spark, Delta Lake

EDUCATION

- **Technology Degree in Systems Analysis and Development** — Estácio University, Brazil (Aug 2023 – Jul 2026)
- **Data Analytics** — Digital College, Brazil (Aug 2026 – Feb 2027, in progress)

LANGUAGES

- **Portuguese:** Native
- **English:** Intermediate (B1)

SOFT SKILLS

Problem Solving • Analytical Thinking • Communication with Business Areas • Requirements Gathering • Technical Documentation • Teamwork • Continuous Learning
